

STEULER
KCH

the culture of swimming pools

[CULTURE]

Culture means common experience and long-standing tradition. It bestows identity, it influences lives and spaces. Culture creates atmosphere beyond the ephemeral and ever increasing challenges of the working world.

Culture encompasses everything humans give rise to. This is the view held by STEULER-KCH too:

THE CULTURE OF SWIMMING-POOLS

Experience and tradition – solid and dependable – individual and dissociated from the modernist zeitgeist with its shifting fashion trends. With time-tested, reliable technology and insight. We understand our customers and build swimming pools that incorporate the wishes and ideas of the owners and operators down to the smallest of details.

“Culture is a finite segment of the meaningless infinity of world affairs on which human beings confer meaning and significance.”

Max Weber, German cultural scholar and sociologist, 1904

STEULER-KCH – THE POOL COMPANY

[EXPERTISE]

STEULER-KCH is your number one choice for swimming pool construction and waterproofing technology. Decades of experience and hundreds of pools – using carefully matched materials, innovative technologies and the expertise and ingenuity needed to realise any project. We draw attention to the waterproofing details and are happy to advise you on the associated cost aspects too. We naturally offer you invaluable assistance with the selection of materials and project implementation too.

We use state-of-the-art CAD systems to transform your ideas and specifications into concrete plans – down to designing a detailed tiling layout for your tile or natural stone surfaces. From the first consultation to project implementation, we assign you a single contact person for everything. He or she is responsible for managing the project team, planning and coordinating project implementation and ensuring that installation work is performed in accordance with the agreed design. The issuing of installation instructions and on-site project supervision are the sole responsibility of STEULER-KCH. For you, this means absolute reliability and comprehensive support with every aspect of your pool project.

Whether the word “spa” was originally derived from the Latin “SANUS PER AQUA” or from the Belgian therapeutic bath town of Spa is a matter of dispute – what is not in dispute, however, is the effect: water is life, it allows us to flourish, it is vital for well-being and relaxation.

[SPA]

STEULER-KCH

It is also indisputable that many hotels and resorts are distinguished by their wellness and spa facilities and that they win many satisfied customers as a result. Spas provide guests with an immediate impression of the quality and service standards of a hotel. Attractive wellness areas with associated offerings can benefit your hotel while imparting it with its own individual and unmistakable character. STEULER-KCH takes your personal vision of individual forms, design, colour scheme and fittings and turns them into reality in a spa perfectly matched to the style of your hotel.

"Thanks to STEULER-KCH's experience, expertise and the many ideas they came up with, we had a partner who was able to help us design our entire wellness area and consistently master even the most challenging aspects of the project here on our island in the middle of the Atlantic."

Roland Bachmeier

Managing Director of the GALO Resort, Madeira

A vertical strip on the left side of the page shows a close-up of water splashing, with many small droplets and a larger splash at the bottom. The background is a dark, textured grey.

[PRIVATE]

Privatum or privus, "one's own" – personal and individual, a swimming pool or a spa landscape that is as much a reflection of your style and personality as your own signature.

Fascinating surfaces, stimulating colours, exciting contrasts, co-ordinated forms, natural stone refinements – with STEULER-KCH, the possibilities are bound only by your imagination. We discuss the project with you and your project partners in person, offer invaluable assistance with the design as well as the selection of materials, specify the waterproofing details with you and professionally manage the project through to performance of the work by our highly experienced specialist technicians.

WE LOOK FORWARD TO TALKING WITH YOU.

"STEULER-KCH demonstrated sound economic sense during the planning of our public baths and performed the work quickly. The 100% leak-proof system means peace of mind for decades to come while significantly reducing operating and refurbishment costs."

Andreas Ramsauer

Managing Director of Wörgler Wasserwelt, Wörgl

"Custom-designed and highly durable turnkey solutions for swimming pools that take economic considerations into account as well. We've really come to appreciate the products and services provided by STEULER-KCH."

Kathrin Weiß

Managing Director of SWE Bäder, Erfurt

[PUBLIC]

The attractiveness of any particular public baths is primarily down to the creativity of the architects. The more ambitious the swimming pool design, the more important it is to incorporate a reliable waterproofing system into the plans from the outset. It should not constrain the imaginativeness of the design and yet remain as watertight after years in service as on day one. By choosing STEULER-KCH, you have a partner with well-thought-out, reliable system solutions for your public baths which you can rely upon both now and for many years to come. Because we use tried-and-tested materials, provide a fast and reliable on-site installation service and offer solutions that significantly reduce ongoing maintenance costs – especially for outdoor pools.

STEULER-KCH provides turnkey solutions to operators and planners who wish to reliably implement their innovative designs. A sure guarantee of the future attractiveness of the public baths.

WE LOOK FORWARD TO TALKING WITH YOU.

[IMPRESSIONS]

[IMPRESSIONS]

[STEULER-Q⁷-SYSTEM]

Integrated drainage channels, fascinating water attractions, innovative pool forms and ornate tiling are just a few of the countless details where the STEULER-Q⁷-System demonstrates its prowess. These are often the areas of a swimming pool that aren't necessarily obvious at first glance. Experts know that it's often here that problems with conventional waterproofing systems are to be found, however.

And what is already a critical issue for a normal freshwater pool is even more important for baths that are operated using mineral-rich or salt water. Thermal, brine, mineral and seawater baths subject the waterproofing system to a never-ending endurance test. An endurance test that the STEULER-Q⁷-System passes with flying colours thanks to the outstanding properties of its component materials.

BEKAPOOL

[SYSTEM BEKAPOOL]

The idea is as simple as it is ingenious: a highly durable and verifiably waterproof plastic lining material is permanently and mechanically attached directly to the tried-and-tested structural building material concrete. The result is a composite material system with all the beneficial properties required for swimming pool construction.

PREFABRICATED CONCRETE ELEMENTS WITH INTEGRATED LINING TECHNOLOGY

This composite material developed by STEULER-KCH represents an innovative, comprehensive modular construction concept for swimming pools. Specific precast concrete segments with the integrated plastic lining are fully prefabricated for each project, transported to the building site and installed in just a short space of time. The prefabricated segments already make allowance for pool equipment and fixtures, such as inlets and overflows, detailing elements and integrated components, which then just need to be connected up on site.
